Abstract:

Parkinson's disease have to be treated at an early stage to avoid severe conditions. So we are trying to address this problem of detecting parkinson's disease at an early stage to reduce severity of disease by using two machine learning models. Deep Belief Network is used for Vocal dataset and Capsule Neural Network is used for Spiral Dataset.

Architectural Flow / Data Flow Diagram:

DBN

CNN

Results and Discussion:

- In this project, various models were explored, and accuracies achieved are as follows :
 - Only DBN : 93%
 - Only CNN : 70%
 - Fused DBN : 97%
 - Fused CNN : 70%
 - Ensemble Model : 70%
